

I think XM Radio is the best thing that ever happened to the airways. Traffic and weather reports is extremely helpful to me when I travel. The idea of not having to change radio stations because you're out of range is fantastic and will cause less accidents. The fact that I do not have to listen to those damn disclosure commercials takes a lot of stress out of my life. XM Radio is a pleasure and I would recommend it to anyone and everyone. I therefore urge the FCC to reject NAB's petition 04-160 (Down with HR 4026) for the good of the people. Thank you.
